## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

Claims 3-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 3, last few lines how can a range of 10 degrees to 90 degrees always result in the grooves extending substantially radially to the bars?

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sutherland in view of Ahrel. Sutherland discloses the basic refiner including bars having grooves; see for example figure X, numeral 95. The bars of Sutherland are not arcuate which may decrease refiner efficiency. Ahrel solves this problem by disclosing similar apparatus including the use of arcuate bars. In order to render the apparatus more efficient, it would have been obvious for one of ordinary skill in the art to modify Sutherland by making the bars arcuate, taught to be desirable by Ahrel. The exact angle of the grooves on the bars would depend on several factors such as material being treated and desired flow characteristics.

### ***Conclusion***

Art Unit: 3725

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
